This inspiring book chronicles the most influential ideas that have shaped industrial and product design. Written by two experts on modern design, it provides a concise history of the subject, and offers a fascinating resource to dip into for the general reader. From the origins of modern design in the craft movements of the 19th and early 20th century, and the changes brought about by mass production, the book traces the most important ideas in design through the modern movement and post-war consumer society to more recent ideas such as Open-Source Design and Biomimicry.

This innovative title looks at the history of the Web from its early roots in the research projects of the US government to the interactive online world we know and use today. Fully illustrated with images of early computing equipment and the inside story of the online world ' s movers and shakers, the book explains the origins of the Web ' s key technologies, such as hypertext and mark-up language, the social ideas that underlie its networks, such as open source, and creative commons, and key moments in its development, such as the movement to broadband and the Dotcom Crash. Later ideas look at the origins of social networking and the latest developments on the Web, such as The Cloud and the Semantic Web. Following the design of the previous titles in the series, this book is in a new, smaller format. It provides an informed and fascinating illustrated history of our most used and fastest-developing technology.

This inspiring book chronicles the most influential ideas that have shaped film since its inception. Entertaining and intelligent, it provides a concise history as well as being a fascinating resource to dip into. Arranged in a broadly chronological order to show the development of film, the ideas include innovative concepts, technologies, techniques, and movements. From the silent era's masterpieces to today's blockbusters and art house movies, these highly illustrated pages are a chance to discover or rediscover films from all around the world.

This compelling book chronicles the most influential ideas that have shaped photography from the invention of the daguerreotype in the early 19th century up to the digital revolution and beyond. Each idea is presented through lively text and arresting visuals, and explores when the idea first evolved and its subsequent impact on photography.

A chronicle of the key ideas that have shaped the adverts we see everyday, 100 Ideas That Changed Advertising offers a fascinating insight into an ever-changing and fast moving industry. Arranged broadly chronologically, the book looks at the overnight revolutions, the flashes of inspiration, and the long-term evolutions that advertisers have wrought upon their industry. Author Simon Veksner guides us through the key ideas behind these changes, from the development of the first advertising formats and the history of branding, to the creative revolutions of the 1960s and the digital age. Looking forward, the book considers the most recent thinking in reaching new audiences, including the rise of neuromarketing and the latest behavioural economics. Illustrated with hundreds of examples of adverts and explaining their power to inspire, delight, and annoy, but above all, to make us buy, the book is an absorbing guide to a turbulent industry.

100 Ideas that Changed Street Style is a look-by-look dissection of the key ideas that changed the way we dress – from the middle of the 20th century to the present day – explaining the most iconic items of clothing and how they were worn, what the look was born of, its cultural background, how it was received, and how it still resonates in fashion today. The modern wardrobe owes its development not just to fashion designers in Paris or Milan but also to gangs and movements brought together by a shared appreciation of music, sport or a particular underground culture, and a certain style that defines membership. These styles have rocked establishments, created stereotypes, expressed social division as much as they have united people, entered the language, spread around the world, and, above all, transformed dress for a wider public.

Every once in a while, an idea comes along that makes the entire world sit up and take notice. From the earliest understandings of our place in the solar system, via Darwinism, DNA, neutrons and quarks, right up to the theories that are pushing the boundaries of our knowledge today, we are forever propelled forward by our most gifted scientific minds. In this fascinating book, former BBC Focus magazine editor Jheni Osman explores 100 of the most forward thinking, far-reaching and downright inspired ideas and inventions in history, each nominated by experts from all fields of science and engineering. With selections from established authorities such as Brian Cox, Patrick Moore, Richard Dawkins and Marcus du Sautoy, Osman covers topics as diverse as the Big Bang, vaccination, computing, radioactivity, human genomes, the wheel and many more. Each essay looks at the logic behind these great inventions, discoveries, theories and experiments, studying the circumstances that brought them into being and assessing the impact that they had on the world at large. An intriguing and thought-provoking collection, 100 Ideas that Changed the World offers us a glimpse into the minds behind history's greatest eureka moments.
