The Handbook of Crime Correlates, Second Edition summarizes more than a century of worldwide research on traits and social conditions associated with criminality and antisocial behavior. Findings are provided in tabular form, enabling readers to determine at a glance the nature of each association. Within each table, results are listed by country, type of crime (or other forms of antisocial behavior), and whether each variable is positively, negatively, or insignificantly associated with offending behavior. Criminal behavior is broken down according to major categories, including violent crime, property crime, drug offenses, sex offenses, delinquency, and recidivism. This book provides a resource for practitioners and academics who are interested in criminal and antisocial behavior. It is relevant to the fields of criminology/criminal justice, sociology, and psychology. No other publication provides as much information about how a wide range of variables—e.g., gender, religion, personality traits, weapons access, alcohol and drug use, social status, geography, and seasonality—correlate with offending behavior. Includes 600+ tables regarding variables related to criminal behavior Consolidates 100+ years of academic research on criminal behavior Findings are identified by country and world regions for easy comparison Lists criminal-related behaviors according to major categories Identifies universal crime correlates

Diagnostic Immunohistochemistry presents the latest

Get Free 1995 Am General Hummer Differential Manual

information and most reliable guidance on immunohistological diagnoses in surgical pathology. David J. Dabbs, MD and other leading experts bring you state-of-the-art coverage on genomic and theranostic applications, molecular anatomic pathology, immunocytology, Non-Hodgkin's lymphoma, and more. Additional features such as tables discussing antibody specifications, differential diagnosis boxes, ancillary anatomic molecular diagnostics, and full-color histological images ensure user-friendly coverage that makes key information easy to find and apply. This concise and complete resource is today's indispensable guide to the effective use of immunohistochemical diagnosis. Discusses diagnostic pitfalls through immunohistologic differential diagnosis wherever appropriate so you can provide the most accurate diagnoses. Presents chapters arranged by organ system for comprehensive coverage of all relevant information in a convenient and intuitive organization. Provides quick reference graphs for antibodies throughout the text that illustrate the frequency of immunostaining for a variety of antibodies in tumors. Includes Key Diagnostic Points boxes in every chapter for a quick summary of text areas that are of particular importance. Features an expert author for each chapter to ensure coverage of the current state of the art.

and technology are the driving forces that will help make it better.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

and technology are the driving forces that will help make it better.

This book is intended for students and professionals who are seeking an up-to-date summary of research-based information on depression. Chapters cover clinical and diagnostic information, as well as features of the course of depression and the demographic features of the disorder. For example, topics include the considerable impairment associated with depression (it isn't 'all in your mind') and discussion of why depression is particularly common in women and the young. A series of chapters discusses the presumed causes of depression, including genetic and biological factors, as well as cognitive, family, stress and interpersonal contributors to depression. Finally, two chapters discuss current developments in the treatment of depressive disorders, including pharmacological and other medical interventions, as well as effective psychotherapies. The book presents research at a level that is understandable by those who are not experts in the field. Also, an attempt is made to present balanced perspectives, acknowledging the contributions of various models of cause and treatment. Clinical examples and practical implications are highlighted to make the book readable and relevant.
