In Dr. Sternberg's theory, the concept of love is a triangle that is made up of three components: Intimacy, which involves feelings of closeness, connectedness, and bondedness Passion, which involves feelings and desires that lead to physical attraction, romance, and sexual consumation

[Sternberg's Triangular Theory and the 7 Types of Love](#)

Psychologist Robert Sternberg's theory describes types of love based on three different scales: intimacy, passion, and commitment. It is important to recognize that a relationship based on a single element is less likely to survive than one based on two or more.

While working on what he hopes will be the world's first sentient computer, Neill Bassett tries to deal with unresolved feelings for his ex-wife as well as an intended one-night stand who is turning into much more. 75,000 first printing.

A Working Theory of Love by Scott Hutchins is a recklessly witty, outrageously honest novel about sex, love and artificial intelligence. 'Tremendous, big, clever. Every once in a while a novel comes along and speaks to a generation ... has much to say about what it means to live, love and lose in the twenty-first century' Guardian Silicon Valley: home of online start-ups, couture coffee, sexual meditation, and the future. In its midst, Neill Bassett is helping to build the world's first artificial intelligence - a computer that talks, thinks, lies, and if all goes to plan, feels bad about it too. But when the experiment swerves in an unexpected direction, Neill is forced to confront a few buried feelings of his own - for his ex-wife, for his dead father, for his twenty-first-century life, and for a very twenty-first-century woman called Rachel, who might just hold the answer to it all...

'Electrifying, Clever, funny and very entertaining' The New York Times 'Worthy of Chuck Palahniuk ... Hutchins's satirical take on 21st-century existence is sharply observed' Independent 'Touching and extremely funny, Neill Bassett is a disenchanted bachelor for the Noughties generation. Brilliantly achieved' QJ 'Inventive, intelligent, hilarious. One of the pleasures here is Hutchins' terrific grasp of the zeitgeist' San Francisco Chronicle 'Terrific. Throughout, Hutchins hits that sweet spot where humour and melancholy comfortably coexist' Entertainment Weekly 'Mixes the everyman likeability of Nick Hornby with a splash of the offbeat intellect of Douglas Coupland' Metro Scott Hutchins teaches at Stanford University, California. His work has appeared in StoryQuarterly, The Rumpus, The New York Times and Esquire. This is his first novel.

Settled back into the San Francisco singles scene following the implosion of his young marriage just months after the honeymoon, Neill Bassett is going through the motions. His carefully modulated routine, however, is soon disrupted in ways he can't dismiss with his usual nonchalance. When Neill's father committed suicide ten years ago, he left behind thousands of pages of secret journals, journals that are stunning in their detail, and, it must be said, their complete banality. But their spectacularly quotidian details, were exactly what artificial intelligence company Amiante Systems was looking for, and Neill was able to parlay them into a job, despite a useless degree in business marketing and absolutely no experience in computer science. He has spent the last two years inputting the diaries into what everyone hopes will become the world's first sentient computer. Essentially, he has been giving it language-using his father's words. Alarming to Neill-if not to the other employees of Amiante-the experiment seems to be working. The computer actually appears to be gaining awareness and, most disconcerting of all, has started asking questions about Neill's childhood. Amid this psychological turmoil, Neill meets Rachel. She was meant to be a one-night stand, but Neill is unexpectedly taken with her and the possibilities she holds. At the same time, he remains preoccupied by unresolved feelings for his ex-wife, who has a talent for appearing at the most unlikely and unfortunate times. When Neill discovers a missing year in the diaries-a year that must hold some secret to his parents' marriage and perhaps even his father's suicide-everything Neill thought he knew about his past comes into question, and every move forward feels impossible to make. With a lightness of touch that belies pitch-perfect emotional control, Scott Hutchins takes us on an odyssey of love, grief, and reconciliation that shows us how, once we let go of the idea that we're trapped by our own sad histories-our childhoods, our bad decisions, our miscommunications with those we love-we have the chance to truly be free. A Working Theory of Love marks the electrifying debut of a prodigious new talent.

This original and lucid account of the complexities of love and its essential role in human well-being draws on the latest scientific research. Three eminent psychiatrists tackle the difficult task of reconciling what artists and thinkers have known for thousands of years about the human heart with what has only recently been learned about the primitive functions of the human brain. A General Theory of Love demonstrates that our nervous systems are not self-contained: from earliest childhood, our brains actually link with those of the people close to us, in a silent rhythm that alters the very structure of our brains, establishes life-long emotional patterns, and makes us, in large part, who we are. Explaining how relationships function, how parents shape their child's developing self, how psychotherapy really works, and how our society dangerously flouts essential emotional laws, this is a work of rare passion and eloquence that will forever change the way you think about human intimacy.

Silicon Valley: home of online start-ups, couture coffee, sexual meditation, and the future. In its midst, Neill Bassett is helping to build the world's first artificial intelligence - a computer that talks, thinks, lies and, if all goes to plan, feels bad about it too. But when the experiment swerves in an unexpected direction, Neill is forced to confront a few buried feelings of his own - for his ex-wife, for his dead father, for his twenty-first-century life and for a very twenty-first-century woman called Rachel, who might just hold the answer to it all . . . 'Electrifying, clever, funny and very entertaining.' The New York Times 'Worthy of Chuck Palahniuk . . . Hutchins's satirical take on 21st-century existence is sharply observed.' Independent 'Touching and extremely funny, Neill Bassett is a disenchanted bachelor for the Noughties generation. Brilliantly achieved.' QJ 'Mixes the everyman likeability of Nick Hornby with a splash of the offbeat intellect of Douglas Coupland.' Metro 'Inventive, intelligent, hilarious. One of the pleasures here is Hutchins' terrific grasp of the zeitgeist.' San Francisco Chronicle

A follow-up to her successful debut Charleston and set in the world's most glamorous landscapes, this moving new love story from Margaret Bradham Thornton draws on a metaphor of entanglement theory to ask: when two people collide, are they forever attached no matter where they are? Helen Gibbs, a British journalist on assignment on the west coast of Mexico, meets Christopher Delavaux, an intriguing half-French, half-American lawyer-turned-financier who has come alone to surf. Living lives that never stop moving, from their first encounter in Bermeja to marriage in London and travels to such places as Saint-Tropez, Tangier, and Santa Clara, Helen and Christopher must decide how much they exist for themselves and how much they exist for each other. In an effort to build his firm, Christopher leads a life full of speed and ambition with little time for Helen and even less when he suspects his business partner of illegal activity. Helen, a reluctant voyeur to Christopher's world of power and position, searches far and wide for reporting work that will "take a bite out of her soul"-refugees in Calais, a mountain climber in Chamonix, an orphaned circus performer in Cuba. A Theory of Love captures the ambivalence at the center of human experience: does one reside in the familiar comforts of solitude or dare to open one's heart and risk having it broken? Set in some of the most pictureaque places in the world, this novel questions what it means to love someone and leaves us wondering-can nothing save us but a fall?

In this funny, brainy, thoroughly engaging debut collection, an award-winning writer looks at romance through the lens of scholarly theories to illuminate love in the information age. In ten captivating and tender stories, E. J. Levy takes readers through the surprisingly erotic terrain of the intellect, offering a smart and modern take on the age-old theme of love-whether between a man and woman, a man and a man, a woman and a woman, or a mother and a child-drawing readers into tales of passion, adultery, and heartbreak. A disheartened English professor's life changes when she goes rock climbing and falls for an outdoorsman. A gay oncologist attending his sister's second wedding ponders dark matter in the universe and the ties that bind us. Three psychiatric patients, each convinced that he is Christ, give rise to a love affair in a small Minnesota town. A Brooklyn woman is thrown out of an ashram for choosing earthly love over enlightenment. A lesbian student of film learns theories of dramatic action the hard way-by falling for a married male professor. Incorporating theories from physics to film to philosophy, from Rational Choice to Thorstein Veblen's Theory of the Leisure Class, these stories movingly explore the heart and mind--shooting cupid's arrow toward a target that may never be reached.

Anthropologist Elizabeth A. Povinelli theorizes intimate relations as sites which bring into view the interplay between liberalism's contradictory ideals of freedom and constraint.

As the oak tree is summarized in the acorn, so nature is summarized in the human brain. They express a model. Looking at this small acorn though, no one can foresee the majestic oak tree it might become. Of course, with only its genetic code it will not develop. In the same way, humans are called to become what our ancestors and even we cannot foresee. But in order to develop all our potentialities some conditions must be met. We surround this acorn with nutrients, water, earth, and light, allowing it to be part of a living whole. For humans, this living whole is nature and society. Alas, at this time both have become deficient. The model is not allowed to freely unfold. This model was intuitively grasped by all great traditions. It led psychoanalyst Carl Gustav Jung to find in Taoism "principles so vast that they can be applied to the entire humanity". With the rise of modern science though, this vision vanished. However, brain research results agree with the model so science is now on the brink of rediscovering it. In Love them back to Life, her second book, Ariane Page takes us on a discovery journey through this model expressed by the human brain as she focuses on love. Love is the tool used by this model, the LIFE (Law Inherent to the Five Elements), to eventually lead us to coherence between our physical, emotional, mental, social, and spiritual realities. In that holism, we will truly feel alive, happy, and loved.
