Depression is a serious but manageable condition that can affect a person's quality of life, and may be associated with an increased risk of cognitive impairment. This report looks at the prevalence of symptoms of depression in residential aged care and the characteristics of residents with symptoms of depression. Over half of all permanent aged care residents had symptoms of depression At 30 June 2012, just over half (52%) of all permanent aged care residents had a Cornell Scale for ...

The only text in the market written specifically for Diploma of Nursing students in Australia and New Zealand. Written by Gabrielle Koutoukidis, Kate Stainton and Jodie Hughson, Tabbner's Nursing Care: Theory and Practice, 7th edition, provides a solid foundation of theoretical knowledge and skills for nursing students embarking on an Enrolled Nurse career. Reflecting the current issues and scope of practice for Enrolled Nurses in Australia, this new edition focuses on the delivery of person-centred care, emphasises critical thinking throughout and demonstrates the application of the decision-making framework across multiple scenarios. Visit [evolve.elsevier.com/AU/Koutoukidis/Tabbner](http://evolve.elsevier.com/AU/Koutoukidis/Tabbner): eBook on VitalSource Teaching resources Image collection – all figures and tables from the textbook Test banks Student resources Answer guides to: o Case studies o Critical thinking exercises o Decision-making framework exercises o Review questions Australian Clinical Skills videos demonstrating core skills to help you link the theory to practice Weblinks Two new chapters: o Nursing informatics and technology in healthcare o Quality and safety in healthcare 83 Clinical Skills aligned with the new 2016 Nursing and Midwifery Board of Australia Enrolled Nurse (EN) Standards for Practice to help you understand the skill and translate it into effective clinical practice Exercises on the decision-making framework for the EN Examples of progress notes and nursing care plan documentation Aligned with the HLT Health Training Package Supported by a NEW companion skills workbook: Essential Enrolled Nursing Skills for Person-Centred Care Includes eBook on VitalSource

Law for Nurses and Midwives continues to be the definitive health law text for nursing and midwifery students who are required to consider legal, professional and ethical considerations as part of their tertiary studies. The 9th edition includes the latest updates to case law and information on nursing and midwifery governance and professional practice standards, outlining a range of legal issues and responsibilities specific to both nursing and midwifery practice, including consent to treatment, confidentiality, professional negligence and professional ethics. Written by the most eminent experts in nursing and midwifery law in Australia, Patricia Staunton and Mary Chiarella, Law for Nurses and Midwives provides a comprehensive and accessible resource for nursing and midwifery students to understand the relevance of legal issues to the provision of safe and effective healthcare. NEW chapter: Chapter 9 The International Confederation of Midwives Code of ethics for midwives and the International Council of Nurses Code of ethics for nurses gives you the latest information on global standards for ethical practice Increased focus on midwives strengthens the text's relevance to midwifery practice Updated chapter content reflects changes to Australian state and territory legislation as well as new case reports keeping you fully informed on issues such as: - nursing and midwifery professional practice standards; - detailed consideration of the legal issues pertinent to mental health; - consent to treatment, including the right to withhold consent and end-of-life planning; - the contract of employment, including workplace health and safety and workers compensation.

This report provides a comprehensive picture of dementia in Australia, illustrated by the latest available data and information on trends over time.

Measuring Capacity to Care Using Nursing Data presents evidence-based solutions regarding the adoption of safe staffing principles and the optimum use of operational data to enable health service delivery strategies that result

in improved patient and organizational outcomes. Readers will learn how to make better use of informatics to collect, share, link and process data collected operationally for the purpose of providing real-time information to decision-makers. The book discusses topics such as dynamic health care environments, health care operational inefficiencies and costly events, how to measure nursing care demand, nursing models of care, data quality and governance, and big data. The content of the book is a valuable source for graduate students in informatics, nurses, nursing managers and several members involved in health care who are interested in learning more about the beneficial use of informatics for improving their services. Presents and discusses evidences from real-world case studies from multiple countries Provides detailed insights of health system complexity in order to improve decision-making Demonstrates the link between nursing data and its use for efficient and effective healthcare service management Discusses several limitations currently experienced and their impact on health service delivery

The objectives of this study are to describe experiences in price setting and how pricing has been used to attain better coverage, quality, financial protection, and health outcomes. It builds on newly commissioned case studies and lessons learned in calculating prices, negotiating with providers, and monitoring changes. Recognising that no single model is applicable to all settings, the study aimed to generate best practices and identify areas for future research, particularly in low- and middle-income settings. The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).

In many industrialized countries, there is a sharp increase of the aging population due to a decrease in fertility rate and an increase in life expectancy. Due to which, the age dependency ratio rises and may cause increased economic burden among working age population. One strategy to combat this problem is to prolong peoples working career. A sufficient work ability is a requirement for a sustainable and prolonged employment. Work ability is primarily a question of balance between work and personal resources. Personal resources change with age, whereas work demands may not change parallel to that, or only change due to globalization or new technology. Work ability, on average, decreases with age, although several different work ability pathways exist during the life course. Work-related factors, as well as general lifestyle, may explain the declines and improvements in work ability during aging. A sustainable work ability throughout the life course is a main incentive for a prolonged working career and a healthy aging. Work ability and work-related factors, are therefore important occupational and public health issues when the age of the population increases. This Special Issue, “Sustainable Work Ability and Aging”, includes in all 16 original articles and one opinion paper, organized in three sections. The research topics cover wide aspects of work ability, from determinants, older employee’s coping with their work, methodological issues as well as results of interventions on promoting work ability.

Artificial intelligence (AI) is regarded as the science and technology for producing an intelligent machine, particularly, an intelligent computer program. Machine learning is an approach to realizing AI comprising a collection of statistical algorithms, of which deep learning is one such example. Due to the rapid development of computer technology, AI has been actively explored for a variety of academic and practical purposes in the context of financial markets. This book focuses on the broad topic of “AI and Financial Markets”, and includes novel research associated with this topic. The book includes contributions on the application of machine learning, agent-based artificial market simulation, and other related skills to the analysis of various aspects of financial markets.

Multi-item surveys are frequently used to study scores on latent factors, like human values, attitudes and behavior. Such studies often include a comparison, between specific groups of individuals, either at one or multiple points in time. If such latent factor means are to be meaningfully compared, the measurement structures including the latent factor and their survey items should be stable across groups and/or over time, that is ‘invariant’. Recent developments in statistics have provided new analytical tools for assessing measurement invariance (MI). The aim of this special issue is to provide a forum for a discussion of MI, covering some crucial ‘themes’: (1) ways to assess and deal with measurement non-invariance; (2) Bayesian and IRT methods employing the concept of approximate measurement invariance; and (3) new or adjusted approaches for testing MI to fit increasingly complex statistical models and specific characteristics of survey data. The special issue started with a kick-off meeting where all potential contributors shared ideas on potential papers. This expert workshop was organized at Utrecht University in The Netherlands and was funded by the Netherlands Organization for Scientific Research (NWO-VENI-451-11-008). After the kick-off meeting the authors submitted their papers, all of which were reviewed by experts in the field. The papers in the eBook are listed in alphabetical order, but in the editorial the papers are introduced thematically. Although it is impossible to cover all areas of relevant research in the field of MI, papers in this eBook provide insight on important aspects of measurement invariance. We hope that the discussions included in this special issue will stimulate further research on MI and facilitate further discussions to support the understanding of the role of MI in multi-item surveys.

Why do we need more questionnaires to measure aspects of spirituality/religiosity when we already have so many well-tried instruments in use? One answer is that research in this field is growing and that new research questions continuously do arise. Several of these new questions cannot be easily answered with the instruments designed for previous questions. The field is expanding and, consequently, the research topics. Meanwhile several multidimensional instruments were developed which cover existential, prosocial, religious and non-religious forms of spirituality, hope, peace and trust—and several more. The ‘disadvantage’ of these instruments is the fact that some are conceptually broad and often rather unspecific, but they might be suited quite well for culturally and spiritually diverse populations when the intention is to compare such diverse groups. This is the reason why more research on new instruments is needed as can be found in this Special Issue, and to stimulate a critical debate about their pros and cons.
