Chapter 14 The Digestive System Children have a special fascination with the workings of the digestive system: They relish crunching a potato chip, delight in making "mustaches" with milk, and giggle when their stomach "growls." As adults, we know that a healthy digestive system is essential for good health, because it converts food into the raw materials that build and fuel our body's cells.

-CHAPTER 17: Conclusion

The second edition of this book is virtually a new book. It is the only comprehensive text on the safety of essential oils and the first review of essential oil/drug interactions and provides detailed essential oil constituent data not found in any other text. Much of the existing text has been re-written, and 80% of the text is completely new. There are 400 comprehensive essential oil profiles and almost 4000 references. There are new chapters on the respiratory system, the cardiovascular system, the urinary system, the digestive system and the nervous system. For each essential oil there is a full breakdown of constituents, and a clear categorization of hazards and risks, with recommended maximum doses and concentrations. There are also 206 Constituent Profiles. There is considerable discussion of carcinogens, the human relevance of some of the animal data, the validity of treating an essential oil as if it was a single chemical, and the arbitrary nature of uncertainty factors. There is a critique of current regulations.

The Digestive System in Systemic Autoimmune Diseases represents the state-of-the-art in the field of digestive disorders in the most common systemic autoimmune diseases. The volume consists of an introductory chapter on imaging techniques in digestive diseases, followed by eight chapters on digestive manifestations in specific systemic autoimmune diseases. The final five chapters deal with digestive diseases with an autoimmune pathogenesis and systemic manifestations. International in scope, the table of contents reads like a Who's who in clinical research on systemic autoimmune diseases. More than 20 contributors from the European Union, the United States, Mexico and
