The Horizon software package allows data to be collected, analyzed, graphed (where appropriate), and stored. If the testing machine allows, it can also provide control over testing operations.

Tinus Olsen Horizon Software Multiple Machine Control

Tinus Olsen 's VEM range of video extensometers are a combination of precision hardware, camera, lens technology – and software: data acquisition, signal processing and data interpretation. The VEM software is the user interface through which the power of the video extensometer system is fully realised. The software can be used for standard routine and repetitive materials testing in tension, compression, shear or flexural modes with one or two gauge length references (Lo), or for more ...
