Here we are writing L for the total angular momentum of the system  $L = L_1 + L_2$ . In this change of representation,  $T(L_1, L_2, L_1, L_2) = T(L_1, L_2, L_2, L_1)$  (1.43) Finally, in this very brief introductory description, we turn to the concept of the change of the quantum state in time.

Liboff presents a steeper learning curve because it starts with the formalities of quantum mechanics, which is not quite easily understood at the beginning. I recommend using Griffiths as a first textbook, and use Liboff in a second course on quantum mechanics.

This is one of the most honestly written book on Quantum Mechanics at introductory level. It does make any effort for clarifying difficulties, without 'cutting corners' along the (explanation) way(s). Liboff has truly done a wonderful Job (starting from the eighties - 1st Edition goes back to 1980!) to actually shape QM matter at undergraduate level.
