The World Is No Longer Flat Culo is an art, fashion, and pop-culture movement that defies all national, cultural, and linguistic boundaries. No matter if you were raised to call it derriere, tush, rear end, or booty, culo is the new epicenter of female sexuality, desire, and empowerment. Over the past decade, some of the world’s most celebrated women have subtly shifted our long-held ideals of physical perfection toward a shape that is more authentic and bold. While culo has long been venerated in certain cultures, it is now becoming the object of worldwide mainstream admiration. This emerging global love affair with culo is as much about the blending of African, Latin, European, and Asian beauty as it is about celebrating the female form’s most coveted asset. Culo by Mazzucco pays tribute to this phenomenon through a singular artistic vision. In more than 200 photographs and artworks created on location around the world, a diverse group of women—some already legendary, some about to become so—embody the spirit of culo and the start of a new era of beauty.

Endorsed by the Society of Light and Lighting, this practical bookoffers comprehensive guidance on how colour, light and contrast canbe incorporated within buildings to enhance their usability. Thebook provides state-of-the-art, clear guidance as well as available information source for busy professionals involved in thedesign or management of new and existing environments. The ways colour, light and contrast are used within builtenvironments are critical in determining how people interact withthe space, and how confident, safe, and secure they will feel whendoing so. They also have a major influence on a person’ssense of well-being and their ability to use the environmentindependently and without undue effort. Understanding how to use colour and contrast and how they areinfluenced by both natural and artificial lighting is vital for allthose involved in the design and management of the environments andspaces we all use. In recent years there has been a considerable amount of workundertaken to further our understanding of how colour, light andcontrast affect emotion and sensory abilities, and how they canassist or hinder people in their everyday lives. Other publications consider these issues individually but TheColour, Light and Contrast Manual: designing and managing inclusivebuilt environments draws knowledge and information together toproduce a unique, comprehensive and informative guide to how thethree elements can work together to improve the design andmanagement of environments for us all. This book is essential for audio power amplifier designers and engineers for one simple reason...it enables you as a professional to develop reliable, high-performance circuits. The Author Douglas Self covers the major issues of distortion and linearity, power supplies, overload, DC-protection and reactive loading. He also tackles unusual forms of compensation and distortion produced by capacitors and fuses. This completely updated fifth edition includes four NEW chapters including one on The XD Principle, invented by the author, and used by Cambridge Audio. Crosstalk, power amplifier input systems, and microcontrollers in amplifiers are also now discussed in this fifth edition, making this book a must-have for audio power amplifier professionals and audiophiles.

The Bunny family has a busy and exciting day on a family outing in town, on a farm, and at the port.

If you are driving off a cliff, someone telling you to slow down isn't much of a help. (Well, slowing down while you turn in a new direction is likely to be a good idea.) By burning fossil fuels, humanity is now driving itself off a climate cliff toward extinction. We need to completely stop burning "stuff" (fossil fuels, or anything else) for energy. Yet to thrive we really do need lots of energy -- in fact, even more than we now are using. This book shows how we can meet both of these needs by creating a new infrastructure context in which existing technologies will work far better than they do now. Not only will we get all our energy at less than one tenth the cost per kilowatt-hour, we will speed up long-distance transportation at least tenfold, plus give everyone a chance to enjoy space travel. And that is just the beginning.
