Indigenous Graphic Communication Systems challenges the adequacy of Western academic views on what writing is and explores how they can be expanded by analyzing the sophisticated graphic communication systems found in Central Mesoamerica and Andean South America. By examining case studies from across the Americas, the authors pursue an enhanced understanding of Native American graphic communication systems and how the study of graphic expression can provide insight into ancient cultures and societies, expressed in indigenous words. Focusing on examples from Central Mexico and the Andes, the authors explore the overlap among writing, graphic expression, and orality in indigenous societies, inviting reevaluation of the Western notion that writing exists only to record language (the spoken chain of speech) as well as accepted beliefs of Western alphabetized societies about the accuracy, durability, and unambiguous nature of their own alphabetized texts. The volume also addresses the rapidly growing field of semasiography and relocates it more productively as one of several underlying operating principles in graphic communication systems. Indigenous Graphic Communication Systems reports new results and insights into the meaning of the rich and varied content of indigenous American graphic expression and culture as well as into the societies and cultures that produce them. It will be of great interest to Mesoamericanists, students, and scholars of anthropology, archaeology, art history, ancient writing systems, and comparative world history. The research for and publication of this book have been supported in part by the National Science Centre of Poland (decision no. NCN-KR-0011/122/13) and the Houston Museum of Natural Science. Contributors: Angélica Baena Ramírez, Christiane Clados, Danièle Dehouve, Stanisław Iwaniszewski, Michel R. Oudijk, Katarzyna Szoblik, Loïc Vauzelle, Gordon Whittaker, Janusz Z. Wołoszyn, David Charles Wright-Carr

Delivers fully relevant comprehensive coverage of the three course units: Technical Graphics 1, Technical Graphics 2, Computer Graphics, Full colour drawings, diagrams and photographs illustrate key points, Each topic takes a step-by-step approach, with clear examples to show how drawings should be approached, A designated chapter on the Thematic Presentation guides students through their coursework, Includes exam-style questions and exemplar material to improve assessed response

programme and provide comprehensive and authoritative guidance. Course Notes give a practical, supportive approach to help deliver the new curriculum and offer an appropriate blend of sound teaching and learning with exam and assessment guidance.

Students learning math are expected to do more than just solve problems; they must also be able to demonstrate their thinking and share their ideas, both orally and in writing. As many classroom teachers have discovered, these can be challenging tasks for students. The good news is, mathematical communication can be taught and mastered. In *Teaching Students to Communicate Mathematically*, Laney Sammons provides practical assistance for K–8 classroom teachers. Drawing on her vast knowledge and experience as a classroom teacher, she covers the basics of effective mathematical communication and offers specific strategies for teaching students how to speak and write about math. Sammons also presents useful suggestions for helping students incorporate correct vocabulary and appropriate representations when presenting their mathematical ideas. This must-have resource will help you help your students improve their understanding of and their skill and confidence in mathematical communication.
