What is voltage drop in circuit? - Answers

Power and volts would drop when letting off the gas especially when coming up to a stop. Assumed it was the alternator since the volts and power would come back up once I would take off or just increase the RPMs. Tested the voltage at the alternator and battery and were at specs. Went ahead and bought new alternator and condition did not change.

Last year the PCM was replaced because of those codes. After replacing it the only code that came back is the p0882 recently p1603 showed up. And they shows up when the weather is hot. So I think its related to heat. I did voltage drop for PCM grounds it was 25 mv however power sides were 74 mv, 255 mv, 320 mv 95 mv 79mv those are for all hot ...

Thus, a 5 V regulated power supply starts with a 12 VAC transformer that delivers 12 V to the bridge rectifier, which converts the AC to DC and drops the voltage down to about 9 V and then delivers the voltage to the filter circuit, which smoothes out the ripples and passes the voltage on to the 7805 voltage regulator, which holds the output voltage at 5 V.
