Set Theory Problems Solutions

Solution. $A = \{x \in \mathbb{Q} \mid -100 < x < 100\}$ is countable since it is a subset of a countable set, \mathbb{Q} . $B = \{(x, y) \mid x \in \mathbb{N}, y \in \mathbb{Z}\}$ is countable because it is the Cartesian product of two countable sets, i.e., $B = \mathbb{N} \times \mathbb{Z}$. $C = (0, .1]$ is uncountable since it is an interval of the form $(a, b]$, where $a < b$.

Question (1):- In a group of 90 students 65 students like tea and 35 students like coffee then how many students like both tea and coffee.

Sets Theory - Exercise Questions And Answers & Set Practice

Set Theory Problems: Solutions 1.

True. Suppose $(a;c) \supseteq A \cap C$. Then $a \supseteq A$ and, since $A \supseteq B$, we have that $a \supseteq B$.

Similarly, $c \supseteq C$ and $C \supseteq D$ implies $c \supseteq D$.

Therefore, $a \supseteq B$ and $c \supseteq D$, so $(a;c) \supseteq B \cap D$.

We may conclude that $A \cap C \supseteq B \cap D$. 2.

Access PDF Set Theory Problems Solutions

True. There are many such bijections; the following is just one example. Define the function $f : (0;1) \rightarrow \mathbb{R}$ by $f(x) = \tan(\sqrt{x-1}=2)$. 3. True. Suppose not.

MATH 574, Practice Problems Set Theory Problems

Solved basic word problems on sets:

1. Let A and B be two finite sets such that $n(A) = 20$, $n(B) = 28$ and $n(A \cap B) = 36$, find $n(A \cup B)$. Solution: Using the formula $n(A \cup B) = n(A) + n(B) - n(A \cap B)$. then $n(A \cup B) = n(A) + n(B) - n(A \cap B) = 20 + 28 - 36. = 48 - 36. = 12.$

Solutions: Sets and Set Theory | Math Goodies

Set Theory /A set is a Many that allows itself to be thought of as a One." (Georg Cantor) In the previous chapters, we have often encountered "sets", for example, prime numbers form a set, domains in predicate logic form sets as well. De ning a set formally is a pretty delicate matter, for now, we will be happy to consider

A set X is a subset of a set Y (or $X \subseteq Y$) if all elements X are also elements of Y . That is if for all x , $x \in X$ implies $x \in Y$, or in symbols $\forall x(x \in X \rightarrow x \in Y)$ For example, Reptile = {snake; alligator} \subseteq Animal We can also give a subset by taking all the elements that satisfy a particular property. For example, the set E of even natural ...

Math: Sets & Set Theory (video lessons, examples and ...

By 1900, set theory was recognized as a distinct branch of mathematics. At just that time, however, several contradictions in so-called naive set theory were discovered. In order to eliminate such problems, an axiomatic basis was developed for the theory of sets analogous to that developed for elementary geometry.
