Get Better Results with high quality content, exercise sets, and step-by-step pedagogy! The Miller/O'Neill/Hyde author team continues to offer an enlightened approach grounded in the fundamentals of classroom experience in Intermediate Algebra. The text reflects the compassion and insight of its experienced author team with features developed to address the specific needs of developmental level students. Throughout the text, the authors communicate to students the very points their instructors are likely to make during lecture, and this helps to reinforce the concepts and provide instruction that leads students to mastery and success. Also included are Problem Recognition Exercises, designed to help students recognize which solution strategies are most appropriate for a given exercise. These types of exercises, along with the number of practice problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.

Use the activities in this book to present mathematical concepts sequentially to your eighth grade students. Includes word problems, practice exercises, a glossary, math tables, and answer keys. Reproducible. 128 pages.

Note, this workbook does not include an answer key. The workbook with answer key should be ready by the end of December. Master the fundamentals of linear equations, grow in mathematical thinking skills, gain proficiency with number sense, and understand how and why math works the way it does. MathWise Linear Equations will help teach and explain basic, as well as progressively advanced, graphing skills. The fun, comic-style format appeals to a wide range of students. Speech bubbles are used throughout to give hints and explanations while students are solving math problems. MathWise Linear Equations starts with the basics of graphing and line slopes and progresses gradually to cover increasingly advanced topics such as solving for intercepts, Standard Form equations, Point Slope equations, linear inequalities, and systems of equations. Tips and Tricks Students have found the tips and tricks to be helpful and memorable, and they have also found that they add interest and excitement to their math studies. Speech Bubbles with Teacher Insights Speech bubbles are used to provide guidance, point out insights, or give helpful hints as students are solving math problems. Students learn best by doing, and the instruction given in the speech bubbles is designed to (1) sharpen students' powers of observation, (2) increase number sense, and (3) instruct in digestible chunks. Simplicity of Instruction Concepts are explained clearly and simply. Every page (excluding review pages or quizzes) has a specific focus. Most pages have generous amounts of white space to keep students focused. Movement is from the simple to the increasingly complex. Step-By-Step Procedures Students learn best when given explicit, step-by-step instruction. When several steps are involved, the steps are numbered. This makes learning much more logical and memorable. Depth and Complexity Logical-Sequential Instruction Math problems are presented in a logical sequence, so that previous problems contribute to students' abilities to solve future problems. The order in which math problems are presented is critical to promoting number sense.
