The general solution method is best explained in terms of the complex reaction network notation where the rate for the  $j$ th species is given :  $N_k \frac{dC_j}{dt} = \sum_{l=1}^L \nu_{jl} r_l$  (1) A solution is assumed of the form:  $C_j = Y_j e^{-\lambda t}$  (2) where  $Y_j$  and  $\lambda$  are constants to be determined.

from the strengths of his classic Elements of Chemical Reaction Engineering, Fourth Edition, in this volume H. Scott Fogler added new material and distilled the essentials for undergraduate students. Fogler's unique way of presenting the material helps students gain a deep, intuitive understanding of the field's essentials through reasoning, using a CRE algorithm, not memorization. He especially focuses on important new energy and safety issues, ranging from solar and biomass applications to the avoidance of runaway reactions. Thoroughly classroom tested, this text reflects feedback from hundreds of students at the University of Michigan and other leading universities. It also

Coverage of chemical kinetics. By introducing heterogeneous chemistry early in the book, the text gives students the knowledge they need to solve real chemistry and industrial problems. An emphasis on problem-solving and numerical techniques ensures students learn and practice the skills they will need later on, whether for industry or graduate work.

Appropriate for a one-semester undergraduate or first-year graduate course, this text introduces the quantitative treatment of chemical reaction engineering. It covers both homogeneous and heterogeneous reacting systems and examines chemical reaction engineering as

This student companion is a supplement to Chemistry: Molecules, Matter, and Change, 4th edition with CD-ROM. It features guided reading strategies, collaborative learning sheets, and strategies for using CD-ROM tools.

The book presents in a clear and concise manner the fundamentals of chemical reaction engineering. The structure of the book allows

the student to solve reaction engineering problems through reasoning rather than through memorization and recall of numerous equations, restrictions, and conditions under which each equation applies. The fourth edition contains more industrial chemistry with real reactors and real engineering and extends the wide range of applications to which chemical reaction engineering principles can be applied (i.e., cobra bites, medications, ecological engineering)
