A sweeping epic of two families—one Dutch, one English—from the time when New Amsterdam was a raw and rowdy settlement, to the triumph of the Revolution, when New York became a new nation's city of dreams. In 1661, Lucas Turner, a barber surgeon, and his sister, Sally, an apothecary, stagger off a small wooden ship after eleven weeks at sea. Bound to each other by blood and necessity, they aim to make a fresh start in the rough and rowdy Dutch settlement of Nieuw Amsterdam; but soon lust, betrayal, and murder will make them mortal enemies. In their struggle to survive in the New World, Lucas and Sally make choices that will burden their descendants with a legacy of secrets and retribution, and create a heritage that sets cousin against cousin, physician against surgeon, and, ultimately, patriot against Tory. In what will be the greatest city in the New World, the fortunes of these two families are inextricably entwined by blood and fire in an unforgettable American saga of pride and ambition, love and hate, and the

Written as a collection of problems, hints and solutions, this book should provide help in learning about both fundamental and applied aspects of this vast field of knowledge, where rapid and exciting developments are taking place.

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades

should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

A solid introduction to stable isotopes that can also be used as an instructive review for more experienced researchers and professionals. The book approaches the use of isotopes from the perspective of ecological and biological research, but its concepts can be applied within other disciplines. Ender's Game meets The 100 at an interstellar military boarding school in a romantic new series from New York Times bestselling author Kass Morgan! Reeling from a devastating attack by a mysterious enemy, the Quatra Fleet Academy is opening its doors to a new class of cadets from every planet in the solar system. Hotshot pilot Vesper dreams of becoming a captain, but when she loses her spot to a wisecracking boy from the wrong side of the asteroid belt, she begins to question everything she thought she knew. Trapped on the toxic planet Deva, Cormak will take any chance he can to join the Academy--even if he has to steal someone's identity to get there. Arran was always an outcast on icy Chetire and is looking for a place to belong. He just never thought it would be in the arms of the hottest guy in the galaxy. And Orelia has infiltrated the fleet to complete a mission, one that threatens the security of everyone around her. But if anyone finds out who she really is, it'll be her life on the line.... As
